

3G USIM CARD

In 3G ,USIM card is a necessary credence for users to acquire the permission and service, which is also the ensurance for user's information and communication's safety. USIM card has the same physic characteristic as SIM card. Most obvious feature lies in that USIM card is a kind of multi-application

For example, in the same HUA HAI USIM card, either 3G and other vaule-added application or financial application(complying PBOC2.0) .

compliant criteria and regulation

- ▶ 3GPP 102 221 V 6.4.0
- ▶ 3GPP 31.102 V 5.4.0
- ▶ 3GPP 31.122 V 3.7.0

Safety and Recognition algorithm

- ▶ Milenage
- ▶ Test Algorithm

Funtion characteristic

- ▶ Supporting latest 3GPP protocol and MILENAGE algorithm
- ▶ Real multi-application card can operate 3G USIM, GSM SIM application and other applications, e.g. PBOC 2.0 credit/loan function
- ▶ Higher safety
- ▶ Extended name card(phone number), supplying users' personal database function;
- ▶ Anti-clone protection;
- ▶ Supporting OTA mode download renew;

▶ Complete USIM application development tools package;

▶ Good compatibility to 2G / 3G mobile terminal;

 **Capacity**

▶ 64K ▶ 128K ▶ 256K
